ACTIVE MINDS PROGRAM

Our Active Minds Program is tailored to support the learning journey of students aged PP to Senior School, with signs of ADHD, Autism, and other behavioural challenges.

On-campus foundational supports and tailored therapy for Australian schools

Welcome to our Active Minds program – a new program which aims to enrich the learning journey of school-aged students from Pre-Primary through to Senior School. This is achieved through the delivery of foundational supports and tailored therapy, designed around the needs of each school. Our expert team of clinicians will work with schools to develop a tailored program to suit the unique needs of a school's student and teaching community.

What does the program offer?

- Developmental screenings for ADHD & behavioural disorders (individuals & class groups);
- Weekly therapeutic before and/or after school program delivered on-site by our expert team of Occupational Therapists, Speech Pathologists, and Exercise Physiologists. The program will be developed around evidence-based programs and strategies i.e. SOCS Speech Program; Zones of Regulation;
- Students granted priority access to our Occupational Therapy, Psychology, Exercise Physiology, Physiotherapy and Speech Pathology services (on-campus services are available);
- Regular PD workshops, hosted by Patches' medical & allied health team;
- Provision of Patches equipment pack, to encourage self-regulation and classroom movement breaks.

Supporting our school kids to thrive

Our goal is to set our young people up for success.
